Final Project Brief

a final brief description of your project (What is the project concept? How do you use it? How is it working technically?)

The project concept is based on the existing game called "Guitar Hero". The processing portion shows the beat notes similar to the game and plays music in the background. Users have to hit the beat as soon as it hits one of the 4 squares at the screen's bottom. In the Arduino portion, users will use a joystick module to hit the beats on time and if they do, LEDs will light up around the joystick.
